

EcoChef AI Architecture

What is the EcoChef AI Web Interface?

It's a web interface built with Flask and HTML/CSS that allows users to interact with the AI.

How does the AI work?

It uses a RAG engine ([rag.py] (<http://rag.py>)) that retrieves relevant chunks from a ChromaDB vector database, which stores knowledge from .txt files.

What happens after the relevant chunks are retrieved?

The top 3 relevant chunks are sent to the IBM Granite LLM, which generates a response.

Where is the generated response displayed?

It's displayed back on the EcoChef AI Web Interface for the user.
